

PROTECTING IMPORTANT MEETINGS FROM COMMERCIAL ESPIONAGE

1) NO meeting is safe from commercial espionage unless the radio frequencies spectrum (RFS) around the meeting room or rooms are monitored during meetings.

2) Most companies that employ a service provider to sweep meeting rooms for eavesdropping devices prior to a meeting or meetings and only receive half a service, why?

a) There are eavesdropping devices that are being sold and used in Asia that simply cannot be found during sweeps,

b) Eavesdropping devices can be deployed after a sweep; before and during meetings,

c) Eavesdropping devices can be switched on and off remotely – OFF during a sweep and ON during a meeting.

3) The only way to protect important meetings is by using Real-Time-Live RF Spectral Analysis after a professional sweep.
